

Lesson 6: Adding Whole Numbers

<p>1) Start with _____ column.</p> <p>Think of each digit as an individual piece of _____</p>	<div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> $\begin{array}{r} 534 \\ + 132 \\ \hline \end{array}$ </div> <div style="display: flex; flex-direction: column; align-items: center;"> <div style="display: flex; gap: 5px;"> □□ </div> <div style="display: flex; gap: 5px;"> □□ </div> <div style="display: flex; gap: 5px; margin-top: 20px;"> □□ </div> </div> </div>
<p>2) Then add the _____ column.</p> <p>Think of each group of ten as a _____ of candy. Ten pieces of candy would fit into each roll.</p>	<div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> $\begin{array}{r} 534 \\ + 132 \\ \hline \end{array}$ </div> <div style="display: flex; flex-direction: column; align-items: center;">  </div> </div>
<p>3) Then add the _____ column.</p> <p>Think of each group of a hundred as a _____ of candy. Ten rolls of candy would fit into a box of candy.</p>	<div style="display: flex; align-items: center; justify-content: center;"> <div style="margin-right: 20px;"> $\begin{array}{r} 534 \\ + 132 \\ \hline \end{array}$ </div> <div style="display: flex; flex-direction: column; align-items: center;">  </div> </div>

Lesson 6: Adding Whole Numbers **Homework:** #'s 2 - 5, 7 - 10, 16 - 18, 22, 24, 26, & 28 on page 36.

Carrying - Moving a group into another column.

$$\begin{array}{r} 523 \\ + 139 \\ \hline \end{array}$$

Diagram illustrating the addition of 523 and 139. The numbers are aligned by place value. To the right of the numbers are small squares representing base ten blocks: two squares above the tens place of 523, and three columns of three squares each to the right of 139.

Carrying - Moving a group into another column.

$$\begin{array}{r} 573 \\ + 135 \\ \hline \end{array}$$
