When you make an **inference**, you combine what you know with something that you've read. The guess you come up with is based on clues you've found in your reading or from your own experience.

Read the story. Then circle YES or NO after each statement to indicate whether it was an inference that could be drawn from the story. Give at least ONE clue if the answer is YES. If the answer is NO, explain why not.

Sammy began to cry. She ran to her brother and began tugging on his pants leg. Charlie sighed and clicked the pause/start button on his controller. He noticed that his sister was pointing at the light switch on the living room wall, so he picked Sammy up, walked over to the switch, and turned the dial to the right.

Sammy looked up at the ceiling light and began to giggle. Then she clapped her hands. After a few moments, she started getting fussy again and leaned towards the switch again. Charlie smiled and turned the dial to the left.

Sammy is a very young child	YES	NO
Text Clues:
