

## Division & Decimals

1) \_\_\_\_\_ the numbers.

$$2 \overline{)57}$$

2) If you have a remainder, add a \_\_\_\_\_ and a \_\_\_\_\_ to the dividend (the number inside the \_\_\_\_\_).

$$2 \overline{)57}$$

Bring the \_\_\_\_\_ point straight up in the quotient (the number on top of the box).

3) \_\_\_\_\_ again.

$$2 \overline{)57}$$

If you have a \_\_\_\_\_ again, add a zero to the dividend and divide until you don't have a \_\_\_\_\_

Example:

$$4 \overline{)67}$$

Example:

$$2 \overline{)39}$$

Example:

$$8 \overline{)93}$$
