

<p>When we do not need to know the exact amount we _____ numbers to a specific place value.</p>	<p><i>The attendance at the game was 614. About _____ people attended the game.</i></p> <p><i>The price of the shoes was \$48.97. The shoes cost about \$50.</i></p>
<p>When we _____ we find another number to which the number is close to.</p> <p>Rounding can help us _____ the answer to a problem.</p>	 <p>Since 67 is nearer to 70 than to 60, we <i>round up</i> to 70.</p>
<p>In a presidential election, each state is assigned a certain number of electoral votes. Based on the 2000 Census, the state of Florida was assigned 27 electoral votes and the state of Texas was assigned 34 electoral votes. About how many electoral votes can a candidate win altogether in those states?</p>	
<p>A community theater group is giving four performances of a play. The theater can seat 424 guests. All of the tickets for each performance have been sold. Estimate the total number of guests who plan to see the performances by first rounding the number of guests for each performance to the nearest hundred.</p>
